Dr. Md. Iqbal Hasan Sarkar

Professor, Dept of CSE, CUET

Omar Sharif

Lecturer, Dept of CSE, CUET

Md. Atiqul Islam Rizvi

Lecturer, Dept of CSE, CUET

Project Features

Front-End Parts

- 1.Home Page
- 2.Product Page
- 3.Product Details Page
- 4.Contact Us Page
- 5.About Us Page
- 6.User Login
- 7.User Register Page
- 8.User Profile Page
- 9.User's Ordered Product Page
- 10.Shopping Cart Page

Database Parts

- 1.Product Table
- 2.User Table
- 3.Product Details Table
- 4.Order Table

Admin Panel

- 1.Login Page
- 2.Insert Product Page
- 3.Delete Product Page
- 4.Modified Product Page

Individual Contribution

Md. Aman Ullah (1704044)

❖ Shopping Cart Page Design

I have designed the Shopping Cart page. This page will show all the necessary information about the buying products. There are six main information about the buying products.

- ✓ Product Name
- ✓ Quantity
- ✓ Unit Price
- ✓ Size
- ✓ Delete Option
- ✓ Sub-Total Option
- ✓ Total Cost

These the main detail information of the buying products. I have used here HTML, CSS, JavaScript for these designs.

❖ Coupon Code Feature

Coupon code feature is one of the most attractive features of online shopping. A customer could use his/her coupon code in this field. If a customer will use coupon code, the price of the buying products will be reduced according the given discount of this ecommerce site.

❖ Order Summary Feature

Order summary feature is for showing the gist of the full the shopping to the customers. There are four details information for the customers. They are:

- ✓ All Sub-Total
- ✓ Shipping and Handling
- ✓ Tax
- ✓ Total Cost

❖ Extra Feature

There are three more features of this shopping cart page. They are 'Continue Shopping', 'Update Cart' and 'Proceed Checkout'. The full functionality of these three features:

- **Continue Shopping:**

This continue shopping feature is mainly for the customer to go back to the home page to buy more products.

- **Update Cart:**

Update cart feature will help the customers to change or edit quantity and delete any product from shopping cart page. Then by clicking this button the shopping cart will update according to the changes.

- **Proceed Checkout:**

Proceed Checkout feature will help the customer to go to the next page for fulfill the full procedure of shipping.

❖ **Suggested Product Feature**

I have added other related products as suggestion. This will help virtual customers to directly visit other relevant products. There is a high probability, this feature will increase the selling rate strongly.

❖ **Preparing This Lab Report**

I prepare this lab report. My team members provided their contribution documents for this week. Then, I have combined and design according to my own way.

❖ **Used Language for Today: HTML, CSS, JavaScript.**

➤ Cart Page Functionality:

I have fetched the data from backend in the cart details page. Also execute the updating functionality of the products added at the cart. Then I apply coupon code features and execute its functionality.

➤ My Account Page Functionality:

When a user clicked on the 'my account' button from the header, then profile page will appear. There are five functionalities here:

- Showing all the orders which were being stored in database
- Pay Offline Details option
- Change Password option and its functionality
- Delete My Account
- Log Out

The data are getting from the database by php and also the account editing and change password update the database by some php commands inside this page.

➤ Design the admin Dashboard:

I have designed the admin dashboard with bootstrap which is fully responsive. Here the admin can see how many products, Customers, Product categories and Orders he has in his website. Also, he can see the latest 5 orders and a short description of the admin. These are getting from the database.

➤ Insert Product Page Design and its functionality:

When an admin select insert product option, insert 'product.php' file will render and then he can insert a new product by filling all characteristics of the product.

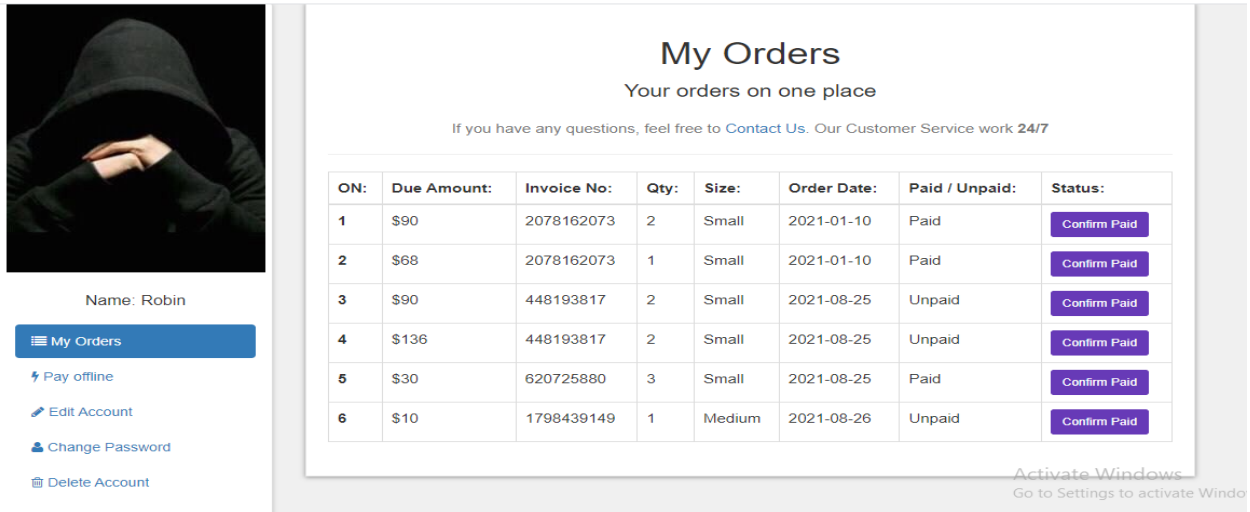

➤ Edit Product Page Design and its functionality:

If an admin wants to change any information of a particular product, then he can do that by clicking the edit option inside the product view page. It will update in the database and then also change the info in the frontend.

➤ Delete Product functionality:

To delete a product, the admin just needs to click on the delete option. Then a confirmation will appear in the pop up that is not the product deleted or not.

- **My Account Page Design**

This week, I have created “My Account” page. In this page, a user has to log in with his email and password if he is already a registered member. Otherwise, at first he has to complete the registration process with his proper information in the “Register” page. This week, I have created “My Account” page. In this page, a user has to log in with his email and password if he is already a registered member. Otherwise, at first he has to complete the registration process with his proper information in the “Register” page.

- **Sidebar Implementation**

In the left upper side of “My Account” page, the full profile options along with the profile image will be seen. Here the subtask under a profile are: My Orders, Pay offline, Edit Account, Change Password, Delete Account and log Out option.

- **My Order View**

In “My Orders” option, a customer can see all of his previous and current orders placed in this marketplace. Due Amount, Invoice, Quantity, Size, Order Date, Paid/Unpaid condition and status of shipment can be seen in this part.

- **Payment Info**

In “Pay Online/Offline” option, a user can find the online and offline payment account details of the company along with Bank name, Credit card info and mobile payment info.

- **Edit Account**

In “Edit Account” option, the details personal info of a user can be changed or modified in correct or new form.

- **Change Password**

In “Change Password” option, a user can change his old password by a new one mentioning that he must verify his identity first by providing his old password.

- **Delete Account**

In “Delete Account” option, account deleting process has been included so that a user can delete his account if he needed.

- **Log out**

In “log out” option, a customer get the way to log out from his current account.

- **Used Language for Today: HTML, CSS, Bootstrap.**
